

# Informatica Health Check

Optimization of your Informatica data management environment

With the Informatica Health Check, developed by INFOMOTION, you can improve design, performance and security, simplify application maintenance, and make necessary adjustments to constantly changing requirements.

## Best practices from long-term project experience with Informatica

Key challenges IT departments often face include creeping performance problems, growing complexity, and a constant increase in maintenance work. The repeated need for external assistance and growing problems with acceptance interfere with system operations and development. Our Informatica Health Check identifies weak points when they occur. Based on an analysis of existing ETL processes and performance tuning check lists, the Informatica Health Check builds the Informatica system founded on proven and best practices for design, the data model, and resulting improvements in performance and efficiency.

## Your custom, modular workshop

We offer the Informatica Health Check in customized variants based on your individual needs. First, we work with you to develop the issues to be prioritized and focused on. A multi-day analysis of the issues in question is carried out by our experts, with the support of your specialists. The complete final documentation includes both activities

we advise completing in the near term, and suggestions for the medium- and long-term focus of your system and necessary associated measures. Of course, you will also receive a valid cost estimate for these recommendations.

## Informatica partnership

As an experienced Informatica business partner, INFOMOTION collaborates closely with Informatica. Ongoing knowledge transfer provides an optimal foundation for successfully completing projects for you, or assessing completed projects once again. This is why INFOMOTION developed the Informatica Health Check.

**We are your partner for data management solutions**

## Health Check modules

The following section lists potential focal areas you can select from.

### Application

Optimizing ETL processes and conducting data modeling improves performance. This means not only faster results, but also better acceptance among your users.

### Development

The Informatica Health Check provides quality assurance for your new developments. It identifies potential performance problems early on.

### Architecture

Potential defects or faults in your infrastructure are discovered, in order to save you and your team unexpected administrative work, and therefore time and money as well.

### Performance

The tests help you find the optimal configuration for your environment, in order to get the most from it for your business.

### Administration

The Health Check is a collection of tests and analyses used to thoroughly test and optimize your Informatica environment.

### Training

Discussions with developers and administrators help identify targeted continued training measures.

## Our approach - your benefit

Your Informatica Health Check can be conducted as a preventative measure, or on a regular or ad hoc basis. Individual phases are carried out as needed, and can be individually selected.

### Available workshop options

You decide on the workshop components you need, and choose the key content areas yourself.

### Problem analysis kick-off meeting

Problematic areas are analyzed, priorities defined, and goals established.

### Architecture review

The architecture is analyzed and the current status is defined in the final documentation.

### Implementation performance

The performance of the overall system is evaluated based on a comprehensive analysis.

### Application design

The structure of the application, including the mapping and data modeling design, is thoroughly analyzed.

### System benchmark

A system diagram in the INFOMOTION laboratory environment, and comparisons with industry benchmarks, provide comparative results for your environment.

### Analytic tools

Our analytic and test tools are used to analyze your environment and applications.

**Improve performance,  
simplify maintenance:  
a successful Health Check  
with INFOMOTION**
